Project Description

- In this project we are going to build an e-commerce android app through which users can buy various products and where the seller can sell various products they manufacture.
- If there is enough time, we might also try to make a website doing the same thing.
- The function of the app will be like Amazon/Walmart android app.
- In this app we will have an authentication page for login/Signup, then there will be a homepage where the user can find various products.
- After that the user can click on any product they like, and it will show them a description of the product they selected.
- If the user likes the product, he can add that product to the cart and buy it or if the user wants to buy the product later, he can save the product by clicking Buy Later.
- Also, sellers can upload their products to sell on the app.
- It will be live that is as soon as the seller uploads a product, it will be reflected on the buyer home screen.

Project Deliverables

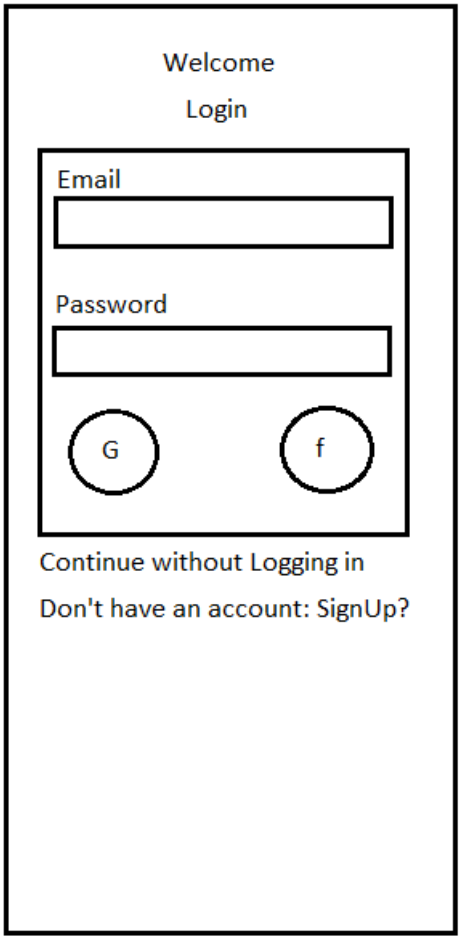
Expected Deliverables

- **Login Page**

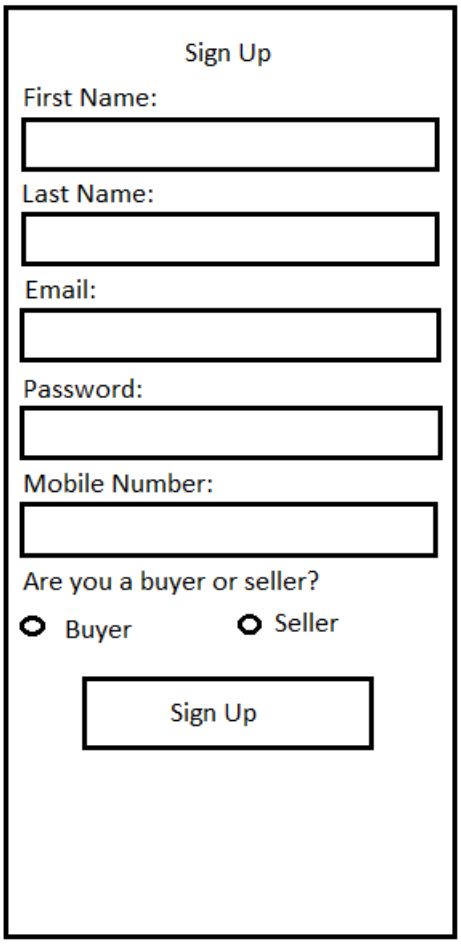
  The first page will be the login in page where the users can login into the app by filling their credentials.

  There will be an option to continue without logging in and to continue with google or Facebook.

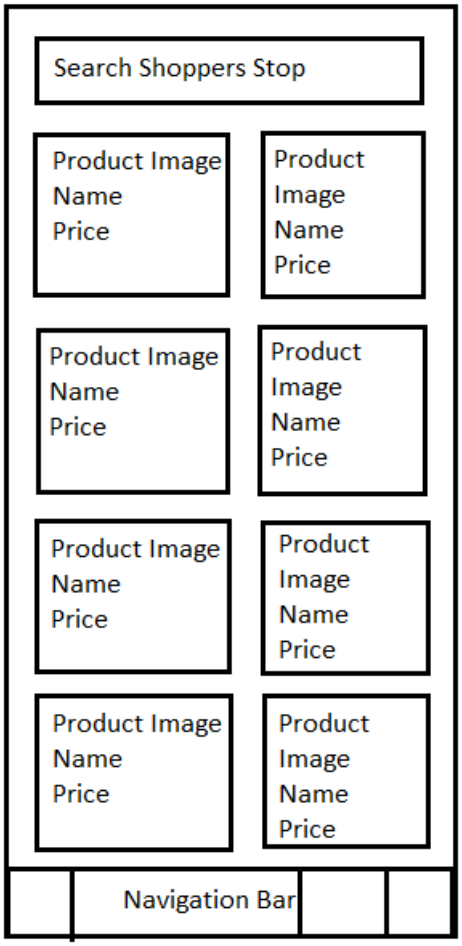
  There will also be an option of Sign Up for the user who are new to app.



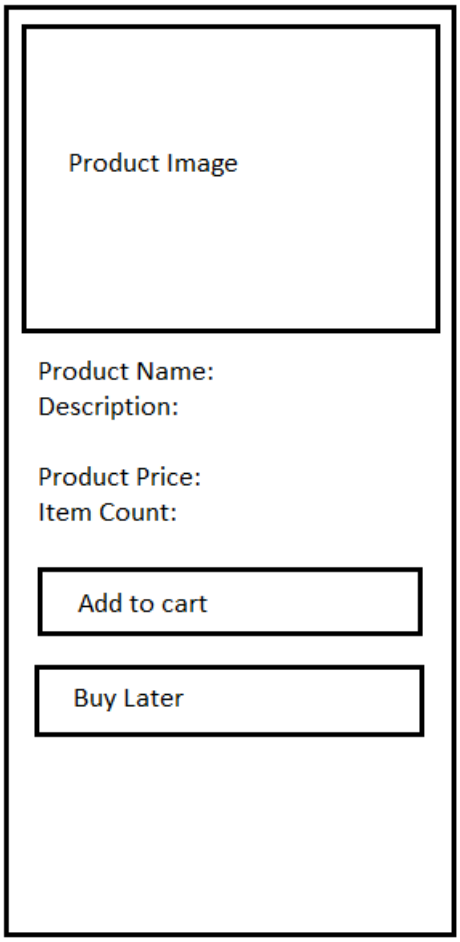
- **Sign Up**
  From this page a new user can sign up to the app and provide their details like email and phone. There will also be an option to create an account as a buyer or as a seller



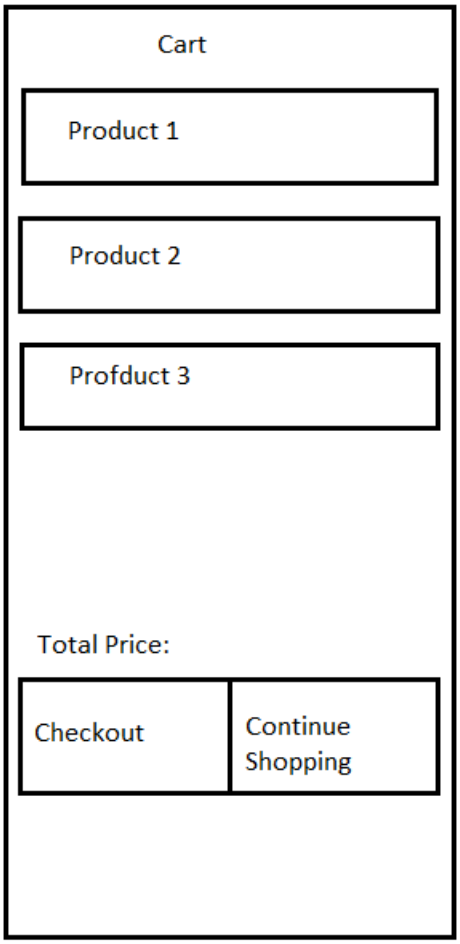
- **Buyer Home Page**
  Here, there will be a search bar for the users to search for the products they need.
  There will also be a catalog of different items with their images and price.
  At the bottom there will be a navigation bar, so the user can go from home to their cart and to contact us pages.



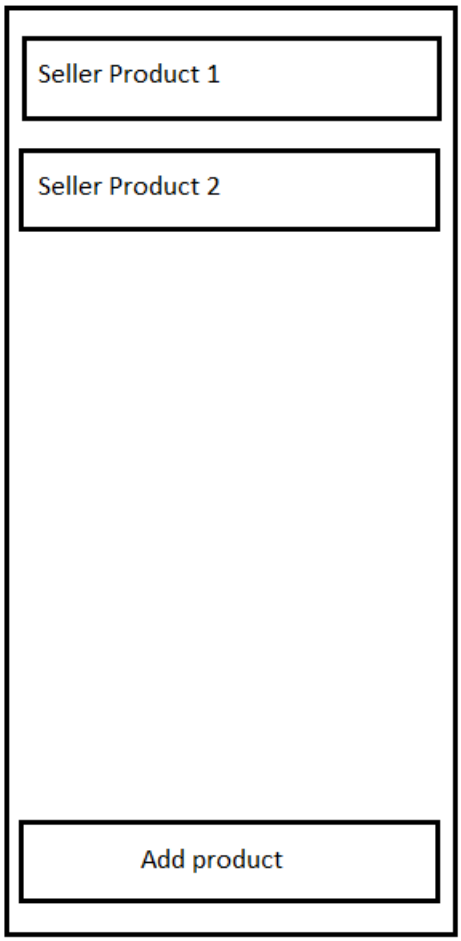
- **Product Page**
  When the user clicks an item from home page, the page for that product will open.
  This page contains the image of the product, its name, description, and price.
  It will have a counter to increase or decrease the count.
  It will also have two buttons to checkout or buy later.



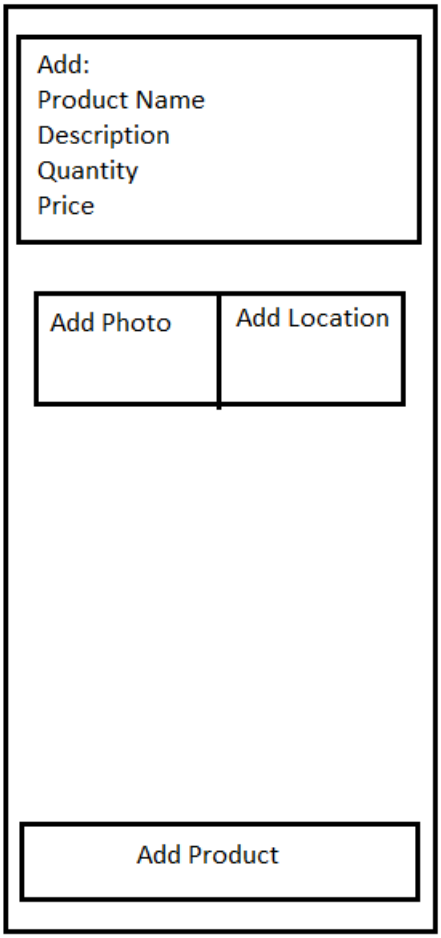
- **Cart**
  Here all the products the user has selected appear.
  It shows the total price of all the products combined.
  It will also have two buttons to checkout or continue shopping.



- **Seller Home Page**
  Here the user who has signed up as seller can see the products, he has put out to sell. There is also a button to add new product.

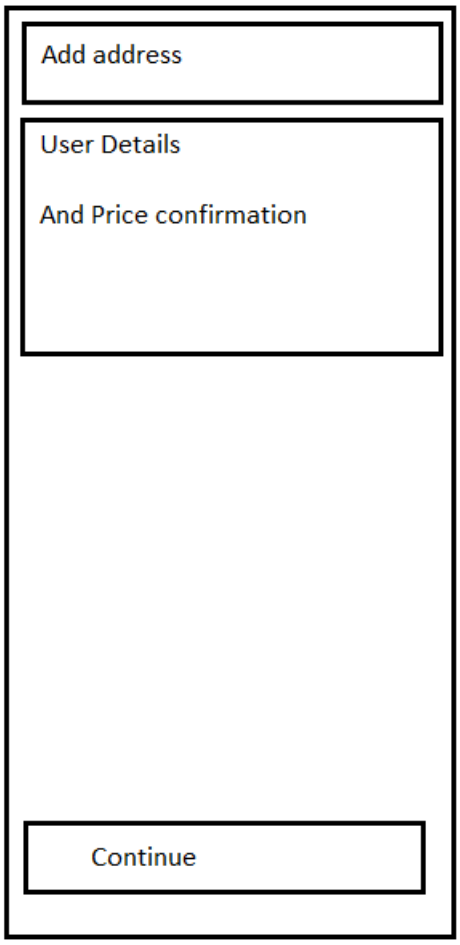


- **Add Product Page**
  On this page the user must enter information about the products he wants to sell and its price and quantity.
  There are two buttons. One is to add an image of the product which will use the camera and other is to set location from where the products can be collected from.
  At the bottom there is a button to confirm to add the product.



Bonus Deliverables:

- **Checkout**
  Here the users can enter their address and confirm their details and the total price including taxes.
  There will be a button to make payment.

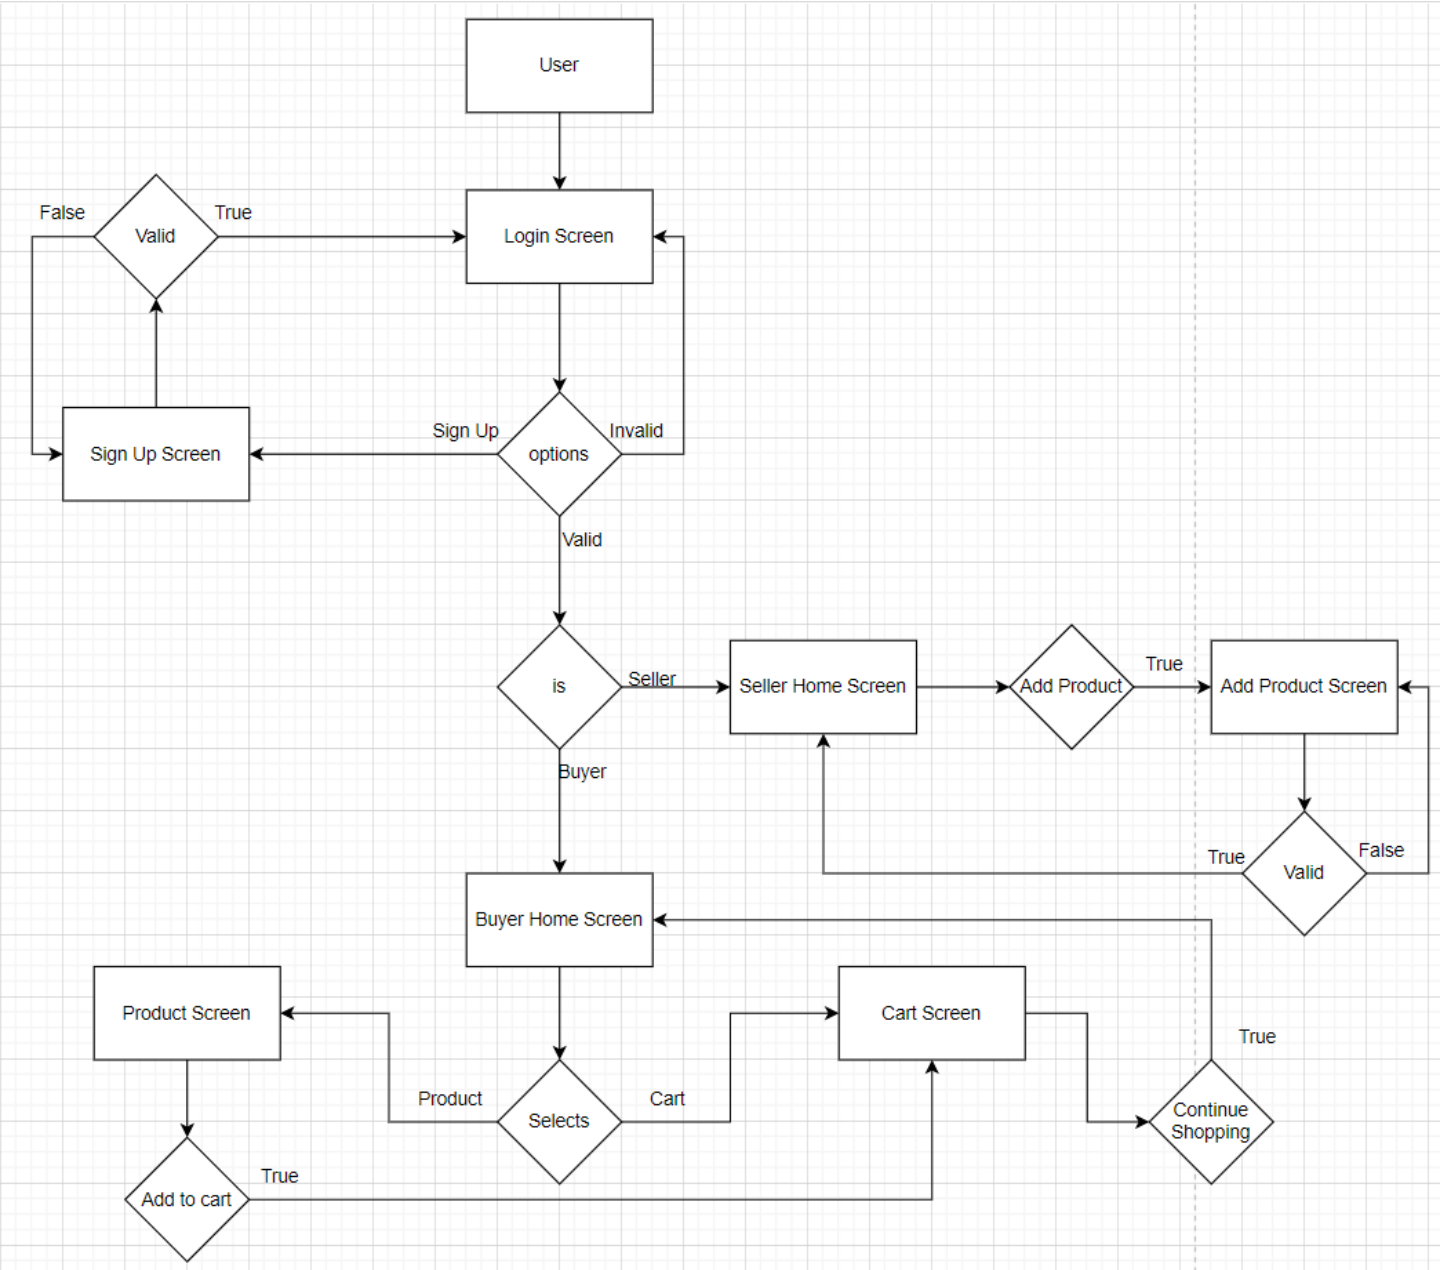


- **Payment**
  Here there will be options to make payment through different methods like debit card, credit card etc.
  Upon selecting an option, they will be redirected to their options page.

- **Contact Us**
  On this page there will be details of the app developer.
  There will also be a text box to send an email directly to the developer.

- **Buy Later**
  Here there will be products that the user wants to buy at another time but wants it saved on their account.

Screen Relationship:



Project Organization

- **Development Work**
  Login/Sign Up -> Devang
  Buyer Home Screen -> Devang, Alok
  Product Screen -> Alok
  Cart Screen -> Alok
  Seller Home Screen -> Devang, Alok
  Add Product Screen -> Devang
  Firebase design and implementation -> Devang
  Design and UI -> Devang, Alok

- **Project Completion Timeline**
  June 23 to June 25: Discuss the project with the partner and finalize the pipeline and UI of app.
  June 26 to June 29: Get Firebase ready and start work on home page
  June 30 to July 2: Complete both the seller and buyer home page.
  July 3 to July 6: Add features to firebase, get product screen and add product screen ready
  July 7 to July 9: Complete Login/Signup and Cart screens ready
  July 10 to July 13: Iron out errors and test the app
  July 14: Project Submission
